

QOREX USE CASE

Mental Health Partnership Trust

Mental Health Trusts, like many NHS organisations, run a complex portfolio of programmes and projects to transform and continually improve their service delivery and optimise expenditure. Keeping track of this inter-related portfolio, the benefits that are targeted and the strategy that it is designed to deliver, is extremely challenging. As the strategy and portfolio evolve it becomes increasingly difficult to manage the transformation and almost impossible to collaborate effectively on its delivery.

Due to the scale and complexity of the task, Mental Health Trusts find themselves unable to quickly and easily identify the complex impact of combined projects and programmes on the benefits and strategy that they were designed to deliver. Without an integrated tool to provide a single point of truth, understand the interdependencies and make visible the impact of their portfolio, it is difficult to understand the consequences from financial, safety, quality and patient care perspectives across departments and functions.

The QOREX NHS Transformation Software (NTS) is implemented with a clear plan designed to support Mental Health Trusts in improving their approach to strategy, transformation and delivery.

The QOREX NTS is initially deployed to standardise the Mental Health Trust's approach to programme and project management, enabling automated reporting, appropriate and efficient governance and collaboration across the organisation.

Next the QOREX NTS is used to provide a structured and consistent approach to strategy. This ensures that the Trust has a clear and measurable set of strategic objectives that are used to drive both transformation and operational delivery and enable the whole organisation to move forwards together to deliver its strategy.

We then work with the Trust, using the QOREX NTS, to standardise and systemise its approach to benefits and risk management. This ensures that benefits are clearly identified, quantified and managed and risks are mitigated effectively and efficiently.

The QOREX NTS will allow the leadership team to optimise their portfolio, plan delivery and enable timely return on investment in their transformation, so that each of their strategic objectives will be achieved without over-investing in any one of them and without incurring an unmanageable level of risk. In short, the QOREX NTS ensures a coherent approach, enables effective collaboration and puts the leadership team in control of their Trust.

To discover if QOREX can help your organisation to develop a structured approach to defining and articulating your strategy and plans for successful transformation try our free [Delivery Maturity Assessment](#) tool.
